

WHEEL ENGINEERING, INC.

WHEEL ENGINEERING, INC.

OTR Wheel Engineering is a rapidly growing company that was established in 1987. OTR is engaged in the manufacture and distribution of wheels, tires and mounted tire/wheel assemblies used on "off the road" equipment. OTR produces high quality products to meet customer requirements on a global scale. OTR Wheel Engineering is a designated "Master Distributor" for Titan International, Inc. OTR also sources products from a variety of international wheel and rim suppliers.

OTR Wheel Engineering is also a provider of specially designed tires to the aerial lift and construction industries.

OTR Wheel Engineering is focused primarily on 3 lines of business.

- Wheels
- Tires
- Wheel/Tire assemblies

OTR manufactures and distributes wheel/rim products used on equipment in the following industry's.

- Earthmoving
- Construction
- Mining
- Agriculture
- Heavy Duty Off Road Truck
- Military
- Industrial
- Forestry
- Rental services
- Off road consumer equipment

WHEELS

OTR Wheel Engineering custom designs and manufactures wheels for customers in a diverse number of industries. We also build replacement or service wheels for a wide variety of off road equipment.

OTR supplies service parts/components for wheels used on a variety of 3 and 5 piece construction and earthmoving wheels and rims. We provide wheel reconditioning, repair and repainting.

With both new and reconditioned wheels, we can provide a number of different undercoat treatments and painting options.

"Engineering Stronger Wheels"

TIRES

OTR Wheel Engineering designs and markets specialty tires used on equipment in construction, agricultural and industrial applications. OTR has developed new tire designs with the Wearmaster and Outrigger tire lines. These lines of tires feature improved compounding, longer wear, greater side wall protection, greater stability and heavily reinforced tire beads. These innovations lead to longer service life and ultimately lower operating cost to the end user.

More innovative OTR tires for specific machine applications are on the way!

Tires are also available with the patented "Tyrllyner" puncture sealer. Machines equipped with the Tyrllyner feature have much less down time due to punctures from nails and screws.

TIRE MOUNTING & MOUNTED ASSEMBLIES

OTR Wheel Engineering operates several high volume tire mounting facilities. Our production facilities are specifically designed to do high volume tire mounting for OEM customers. We can provide your wheels, special under coat treatments, top coated with your specific color of paint and mounted with your tire of choice. We can provide your mounted assemblies palletized, shrink wrapped and delivered in a "just in time" delivery schedule.

Our facilities can also do small tire mounting production runs for end user customers.

As a regular service, our tire mounting facilities are capable of providing several foam fill options and liquid ballast when required.
