OTR Expands Track Offering with E5 Tread Pattern for Smoother Rides, Surface-Friendly Performance

ROME, Ga. – [OTR Engineered Solutions \(OTR\)](#) offers customers greater rubber track selection with its [TrackBoss® E5 tread](#). The new track is an ideal solution for minimizing damage to sensitive surfaces without sacrificing performance.

“Operators shouldn’t have to choose between protecting the jobsite and getting work done. The E5 tread is designed to deliver on both, combining surface-friendly performance with the durability and traction customers expect from OTR track solutions,” said Michael Dembe, Vice President of Construction.

Featuring a distinct multi-bar pattern, the E5 tread combines the smooth ride of traditional straight-bar treads with the higher traction of those with multiple connecting points. Like all other tracks in the [TrackBoss line](#), the E5 is made from exclusive rubber compounds that are formulated for enhanced tread durability and resistance to cutting and chunking. It’s engineered for longer service life with no degradation in performance. The new tread is currently available in the most commonly used sizes and widths for compact track loaders.

“Innovations like the E5 tread reflect OTR’s continued investment in expanding our track solutions and delivering greater value to customers worldwide,” said Oscar Torres, President & CEO. “As we grow our presence across both aftermarket and OEM channels, we remain focused on providing high-performance solutions that meet the evolving needs of equipment operators and manufacturers.”

Customers can easily find the best size and tread style for their equipment and application by using OTR’s online [Track Finder](#) tool, which makes it easier than ever to identify proper track solutions. Many options are available for a wide range of equipment, such as carriers, compact track loaders, cranes, drills, and mini excavators.

OTR Engineered Solutions is a market-leading global enterprise specializing in off-the-road tire, wheel, and track solutions for original equipment manufacturers (OEMs) and aftermarkets. Known for being an innovator in multiple off-the-road applications, OTR differentiates itself by providing value-added

services such as warehousing, tire mounting, and sequencing, among other things. The firm has long established strategic partnerships with OEMs covering Construction, Lawn & Garden, Powersports, Agriculture, Forestry, Mining, Material Handling, and Specialty Vehicle markets. OTR's infrastructure comprises 30+ facilities and warehouse locations throughout the U.S., Canada, Europe, and Asia, serving customers globally.
