OTR Boosts WorkBoss® CT Lineup with 12 New Sizes for More Compact Tractor Applications

ROME, Ga. – Finding the right tire for compact tractors just got easier with the expansion of the WorkBoss® CT product line from OTR Engineered Solutions (OTR). Designed in close collaboration with OEM customers, the popular WorkBoss CT non-directional compact tractor tire has grown to 14 sizes. With rim diameters from 8 to 24 inches and load capacities from 785 to 8,250 pounds, customers can now count on the WorkBoss CT's quieter ride, rock-solid stability, and heavy-duty toughness across more machines and applications than before.

"Making customers' lives easier drives everything we do, and this expansion puts WorkBoss CT performance within the reach of nearly every compact tractor our customers run," said Chris Strabley, Technical Specialist, Engineering for OTR. "Whether you're mowing turf, moving material, or pushing a tractor to its limits, there's now a WorkBoss CT built for your job, and we're confident it will outperform anything else in its class."

Every detail of the WorkBoss CT is custom designed and engineered with the customer in mind. A squarer sidewall profile enhances durability and reduces sidewall flex, so tires hold their shape and work longer. A continuous lug design adds stability, even when handling heavier loads. Shallower grooves create a stiffer tread that resists bending, while tie bars between the tread blocks give operators better handling confidence.

For operators, the result is a quieter, smoother ride, and greater stability under load than competing tractor tires. An optimized tread pattern dials down noise and vibration for a more comfortable workday, and advanced rubber compounds resist premature wear, so customers spend less time and money replacing tires. The non-directional tread makes installation easy and keeps inventory lean with a single part number that fits both sides of the tractor.

Customers can take on more demanding jobs with confidence. The WorkBoss CT is available in industry-leading 6- and 8-ply constructions, providing the added strength and durability required for challenging applications. Additional ply ratings are available upon request.

“We want every customer to feel confident that they have the right tire for their machine and application,” said Patrick Sexton, Vice President of Engineering and Innovation. “With a broad range of sizes and ply ratings, the WorkBoss CT makes it easy for operators and OEMs to select a tire engineered to deliver the performance, durability, and reliability their equipment demands.”

Finding the information they need is just as easy. Every WorkBoss CT tire features a QR code molded directly into the sidewall, giving operators, dealers, and OEMs instant access to product specifications, application information, service resources, and support—whenever and wherever they need it.

OTR Engineered Solutions is a market-leading global enterprise specializing in off-the-road tire, wheel, and track solutions for original equipment manufacturers (OEMs) and aftermarkets. Known for being an innovator in multiple off-the-road applications, OTR differentiates itself by providing value-added services such as warehousing, tire mounting, and sequencing, among other things. The firm has long established strategic partnerships with OEMs covering Construction, Lawn & Garden, Powersports, Agriculture, Forestry, Mining, Material Handling, and Specialty Vehicle markets. OTR’s infrastructure comprises 30+ facilities and warehouse locations throughout the U.S., Canada, Europe, and Asia, serving customers globally.
